

Pratik Jadhav

Co-Founder & Tech Lead • AI / Full-Stack Engineer • Product Builder

📍 Navi Mumbai, Maharashtra, India ✉️ posj2004@gmail.com ☎️ +91 80970 81504
🐙 [GitHub](#) 🔗 [LinkedIn](#) 🌐 [Portfolio](#)

Professional Summary

Co-Founder and Tech Lead with a dual profile spanning AI engineering and startup execution. Experienced in architecting and shipping production-grade, full-stack AI systems — from multimodal LLM-powered platforms to blockchain-ready marketplaces — while simultaneously leading on strategy, user research, and go-to-market. Conducted on-ground farmer interviews across Maharashtra, directed social media growth, and owned product vision end-to-end at UniAgriq. All portfolio projects are deployed in production and hardened against real-world attack vectors with rate limiting, input validation, and server-side RBAC enforced across the stack. Currently completing B.Tech in Computer Engineering (2026) with specialisation in AI, Machine Learning, and Full-Stack Development.

Core Competencies

AI / ML LLM Integration (Claude, Gemini) · RAG Systems · Multimodal AI · Computer Vision (YOLOv8) · Prompt Engineering · LangChain · Vector DBs (FAISS, Pinecone)

Engineering Next.js · React · TypeScript · Node.js · FastAPI · Supabase · PostgreSQL · Prisma · Redis · Docker · AWS · Firebase · Vercel Serverless

Web3 / Infra ERC-1155 Token Architecture · Blockchain Asset Projection · Geospatial GIS (Leaflet, GeoJSON) · RBAC · Security Hardening · API Rate-Limiting

Product & UX UI/UX Design (Framer Motion, Glassmorphism) · Rapid Prototyping · Figma-to-Production · Performance Optimisation · Responsive Design

Business Co-Founder · Startup Strategy · GTM Planning · Revenue Modelling · Market Research · User Interviews · Business Model Design · Financial Modelling · Subscription Monetisation

Data Python · Pandas · Data Analysis · Remote Sensing APIs (NASA POWER, Sentinel-2) · Qualitative Research

Content Social Media Analytics · Script Writing · Video Editing · Brand Storytelling · Community Building

Professional Experience

Co-Founder & Tech Lead · *UniAgriq*
Navi Mumbai, Maharashtra

2024 – Present

- **Product vision & ownership:** Founded and led two NDA-protected platforms — UniAgriq Tech (AI precision agriculture) and UniAgriq Business (agri marketplace) — defining product scope, prioritisation roadmaps, and success metrics from day zero; held full accountability for delivery timelines and stakeholder outcomes.
- **Team leadership:** Recruited, onboarded, and managed a cross-functional team of developers and domain contributors; assigned sprint-wise tasks with clear deliverables and ran structured weekly syncs, translating high-level product goals into granular, executable work items.
- **Process design:** Converted raw, ambiguous inputs — farmer pain points from field visits, scattered agri-data sources, and undefined use cases — into structured requirement documents, phased roadmaps, and defined team workflows. Built processes for feature scoping, review cycles, and release handoffs where none previously existed.
- **On-ground market research:** Conducted direct farm visits across Maharashtra, interviewing farmers to surface operational challenges and willingness-to-pay signals; synthesised qualitative field data into actionable business insights shaping product positioning, pricing strategy, and feature prioritisation.

- **Business model & GTM strategy:** Designed the full business model targeting smallholder farmers, agri-input suppliers, and institutional buyers; defined multi-stream revenue architecture (SaaS subscriptions, marketplace commissions, B2B data licensing);
- **Marketing & content operations:** Owned end-to-end marketing execution — developed content calendar, wrote educational scripts, produced and edited video content, managed distribution across social channels, and tracked engagement metrics to continuously refine messaging.
- **Partnerships, compliance & IP management:** ensuring legal and operational readiness for institutional partnerships and investor due diligence.

AI & Backend Developer Intern · IBM CSRBOX

Jul 2025 – Aug 2025

Remote

- Led a team of 8 developers in building an AI-powered textbook generation platform using LangChain, Gemini API, and FAISS — delivering a production-ready RAG architecture within a 6-week sprint.
- Owned backend design decisions, sprint planning, and code review; mentored junior developers on LLM integration patterns and vector database workflows.

Data Analyst Intern · Profive Engineering

Jun 2025

Navi Mumbai, Maharashtra

- Analysed engineering datasets using Python and Pandas to derive operational insights and support material performance evaluation; surfaced findings to senior engineers as actionable reports.

Production Projects

UniAgriq Tech — AI Precision Agriculture Platform

NDA Protected

Next.js 16 · TypeScript · Supabase · Upstash Redis · Claude AI · Leaflet · NASA POWER · Sentinel-2

- Engineered a serverless data pipeline orchestrating NASA POWER, Sentinel-2, and Open-Meteo APIs with distributed Upstash Redis caching and sliding-window rate limiting, minimising latency at scale.
- Integrated 15+ Claude 4.5 multimodal endpoints for predictive yield modelling, OCR soil telemetry extraction, and computer vision plant pathology diagnosis — a comprehensive precision-agriculture AI stack.
- Built a React-Leaflet GIS module with complex GeoJSON spatial transformations for real-time NDVI satellite mapping; implemented a scanline intersection algorithm for automated drip irrigation layout generation.

UniAgriq Business — Agri Marketplace & Social Platform

NDA Protected

Next.js · React · TypeScript · Supabase · PostgreSQL · Razorpay

- Architected a scalable two-sided marketplace with integrated social networking for community engagement in the agricultural sector.
- Designed data-driven financial modelling algorithms and integrated Razorpay for secure automated payment processing; built complex RBAC on Supabase/PostgreSQL powering a centralised admin dashboard.

ChronoX — Professional Time Tokenisation Marketplace

[🔗 Live](#)

Next.js · TypeScript · Tailwind CSS · Prisma · Framer Motion · ERC-1155

- Architected a full-stack real-time marketplace for tokenising professional time with dual synchronised portals for service seekers and providers.
- Engineered a custom server-side biometric simulation engine that dynamically recalculates provider focus scores and reprices time blocks in real time via a Prisma-managed relational database.
- Built a blockchain-ready asset projection layer mirroring 15-minute booking slots to deterministic ERC-1155 payloads, with automated metadata endpoints and simulated ledger event tracking.
- Delivered hardware-accelerated 3D reactive UI with Framer Motion, ambient cursor-tracking glows, and cinematic responsive layouts.

ARCHON-7 — AI Adaptive Learning Platform

[🔗 Live](#)

TypeScript · Node.js · Claude API · Supabase · Upstash Redis · Razorpay · Vercel Serverless

- Architected an AI-driven learning platform using the Anthropic Claude API to dynamically generate personalised, multi-module curriculums based on user proficiency — fully serverless on Vercel.
- Engineered a stateful frontend with custom CSS glassmorphism design system, real-time markdown and interactive diagram rendering (marked.js + mermaid.js), and a local-storage tab history engine.
- Implemented end-to-end security: Supabase authentication, Upstash Redis API rate-limiting, and tiered Razorpay subscription monetisation (Starter / Pro).

EventEase — Dual-Portal Event Vendor Marketplace

[🔗 Live](#)

React · TypeScript · Vite · Firebase Firestore · Gemini API

- Built a dual-portal application with Context API for robust session state and secure role-based routing between isolated client and organiser environments.
- Engineered real-time bi-directional data sync using Firebase Firestore `onSnapshot` listeners; optimised query execution via client-side sorting to bypass expensive composite index requirements.
- Enforced strict RBAC via Firestore Security Rules — validating server-side timestamps, payload structures, and session tokens to prevent unauthorised data injection and ensure tenant isolation.
- Integrated Google Gemini REST API with custom prompt structures to parse unstructured user inputs into actionable data payloads, minimising client-side SDK bloat.

ConnectHub — Hyperlocal Marketplace & Civic Tracker

[🔗 Live](#)

Next.js 15 · TypeScript · Tailwind CSS · Leaflet · Supabase · PostgreSQL

- Engineered a full-stack hyperlocal marketplace with a dual-mode service adapter dynamically bridging stateful LocalStorage with cloud Supabase/PostgreSQL via configuration flags.
- Implemented real-time geolocation matching via client-side Haversine formula calculation and an instant messaging module with container-scoped DOM scrolling for fluid UX.

Education

Bachelor of Technology in Computer Engineering · University of Mumbai

2022 – 2026

Navi Mumbai, Maharashtra

Certifications

- | | |
|--|---------------------|
| • AWS Certified Developer – Associate | Amazon Web Services |
| • Google Data Analytics Professional Certificate | Google |
| • Google AI Essentials | Google |
| • Google Prompt Engineering | Google |
| • GenAI Specialist | GrowthSchool |
| • AI Entrepreneurship Certification | GrowthSchool |

Achievements & Recognition

- **AIR 7 — Smart India Hackathon 2025** — National-level AI hackathon; top 7 out of thousands of teams across India
- **AIR 4 — All India Maths & Science Talent Search Examination** — Top all-India ranking in competitive national examination
- **2nd Place — Insignia Idea Event** — Innovation & entrepreneurship competition
- **3rd Place — Ideathon, KJ Somaiya College** — College-level product ideation competition
- **1st Place — College Chess Championship** — Rated 1764; college chess champion
- **Winner — College Debate Competition** — Strategic communication and public speaking excellence

All projects are deployed in production and engineered with security-first principles — rate limiting, input validation, and server-side RBAC enforced across the stack.
